

## Grimm Audio MU2 firmware change log

### v1.0.3

#### Improvements

1. Faster reloading of the GRUI for specific cases.
2. IR button selection order in the menu fixed.
3. Improved feedback when the update fails.
4. Serial number shown in Roon device info fixed.
5. IR remote commands are not executed while in IR programming mode.
6. Internal music disk was not always mountable on Windows 11 since version 24H2. To satisfy the new safety requirements for Windows, the internal disk now requires credentials.

The username is: mu2-user

The password is: mu2-pass

#### Bug fixes

1. The digital inputs now always lock to the incoming AES.
2. Small rendering bug fixed.

### v1.0.1

#### Bug fixes

1. fixed support mode error.

### v1.0.0

#### New Features

1. Roon Ready endpoint implemented. This adds the following features:

- Roon Server in MU1 can be switched off, external Roon Server can be fully used.
  - Roon app volume control in dB which matches the display.
  - Signal path in Roon shows audio processing steps in the FPGA including upsampling.
  - A MU1 logo is shown and gives access to the GRUI and product page.
  - Grimm Extension removed as it is no longer required. Track information is shown for both internal and external servers.
2. Float file format support.
  3. Grimm IR remote preprogrammed when IR settings are restored
  4. Tidal Connect, including loudness normalisation. Supports all file formats available from Tidal.
  5. UPnP renderer, including loudness normalisation. Supports stereo and multichannel Wav, flac, ogg, aac, aiff, mp3, mpeg, dsd, dsf, dff, wavpack and raw PCM 16/24 bit. More formats can be added on request.
  6. Added bit-test. The system can test bit-transparency of the digital chain with dedicated files supplied by Grimm Audio.
  7. Logo in the GRUI of the current source links to the corresponding Roon or Tidal app.

## **Improvements**

1. Stand-by via IR remote activated after single press.
2. Display can restore it self after crash.
3. FPGA: Various improvements to timing and power usage.
4. PC driver: Slightly faster display drawing.
5. Better logging when internal crash occurs.
6. Linux kernel version updated.

## **Bug fixes**

1. Distortion bug resolved
2. Problem with pop due to mute relay solved.
3. AES input mutes when data instead of audio is detected; feedback on display fixed.
4. Collapsible GRUI settings do not overflow their container anymore.

# v0.9.6

## **New Features**

1. Added fixed volume option.
2. Jump to source Roon when pressing play in the Roon app if source was not Roon already.
3. Added self test for system integrity.

## **Improvements**

1. Default startup volume changed to -42dB.
2. Display of the MU1 will show "Roon Server Disabled" if the server was stopped via the GRUI.
3. Update system improvements.

## **Bug fixes**

1. Fixed issue introduced with Roon build 1365 that one could not log into Roon after a database reset.

# v0.9.3

## **Improvements**

1. Auto mount music disk in Roon.

## **Bug fixes**

1. Fixed Roon start and stop buttons in GRUI.
2. Various underwater fixes.
