Grimm Audio's Video to Word Clock Converter VCC adds video-sync functionality to the CCI or any other word clock receiving device. Although many postproduction facilities have selected word clock for all their synchronisation needs, in some cases an audio system just has to synchronize to a video source. VCC offers a convenient add-on system that takes very little space.

VCC will slave to both PAL and NTSC. Its power light doubles as lock indicator. The rugged box and power adapter connection make sure this vital function will perform reliable even in live setups.
